

(IMPORTANT: This document must be signed and returned to BFA before your athlete can take the field)

BFA Concussion Parent/Player Information Sheet for Athletes and Parents/Legal Guardians

BFA Concussion Policy

In support to Statute 121A.37, Bloomington Fastpitch Association has approved and adopted the following requirements for its membership including players, parents, officials and coaches.

To ensure compliance and for the well being of the athletes, BFA requires the following;

- Annually, the players and parents/legal guardians must sign the “BFA CONCUSSION PARENT/PLAYER INFO SHEET” as a requirement to completing BFA’s registration process.
- An informed consent must be signed annually by parents and youth athletes acknowledging the risk of head injury prior to practice or competition
- A youth athlete who is suspected of sustaining a concussion or head injury must be removed from play – “when in doubt, sit them out”
- A youth athlete who has been removed from play **must receive written clearance from a licensed health care provider prior to returning to play**

To ensure compliance, BFA requires that all players and parents/legal guardians read, sign and return this Concussion Information Sheet prior to entering the field for practice or games.

Further, BFA will not allow any player who does not already have a signed Concussion Information Sheet on file with BFA or can not present one at the time of the first practice to participate in any BFA activities.

Bloomington Fastpitch Association

What is a Concussion?

A concussion is a brain injury and all brain injuries are serious. They are caused by a bump, blow, or jolt to the head, or by a blow to another part of the body with the force transmitted to the head. They can range from mild to severe and can disrupt the way the brain normally works. Even though most concussions are mild, **all concussions are potentially serious and may result in complications including prolonged brain damage and death if not recognized and managed properly.**

In other words, even a “ding” or a bump on the head can be serious. You can’t see a concussion and most sports concussions occur without loss of consciousness. Signs and symptoms of concussion may show up right after the injury or can take hours or days to fully appear.

If your child reports any symptoms of concussion, or if you notice the symptoms or signs of concussion yourself, seek medical attention right away.

Symptoms may include one or more of the following:

- Headaches
- “Pressure in head”
- Nausea or vomiting
- Neck pain
- Balance problems or dizziness
- Blurred, double, or fuzzy vision
- Sensitivity to light or noise
- Feeling sluggish or slowed down
- Feeling foggy or groggy
- Drowsiness
- Change in sleep patterns
- Amnesia
- “Don’t feel right”
- Fatigue or low energy
- Sadness
- Nervousness or anxiety
- Irritability
- More emotional
- Confusion
- Concentration or memory problems (forgetting game plays)
- Repeating the same question/comment

Signs observed by teammates, parents and coaches include:

- Appears dazed
- Vacant facial expression
- Confused about assignment
- Forgets plays
- Is unsure of game, score, or opponent
- Moves clumsily or displays incoordination
- Answers questions slowly
- Slurred speech
- Shows behavior or personality changes
- Can’t recall events prior to hit
- Can’t recall events after hit
- Seizures or convulsions
- Any change in typical behavior or personality
- Loses consciousness

What can happen if my child keeps on playing with a concussion or returns too soon?

Athletes with the signs and symptoms of concussion should be removed from play immediately. Continuing to play with the signs and symptoms of a concussion leaves the young athlete especially vulnerable to greater injury. There is an increased risk of significant damage from a concussion for a period of time after that concussion

occurs, particularly if the athlete suffers another concussion before completely recovering from the first one. This can lead to prolonged recovery, or even to severe brain swelling (second impact syndrome) with devastating and even fatal consequences. It is well known that adolescent or teenage athlete will often under report symptoms of injuries. And concussions are no different. As a result, education of administrators, coaches, parents and students is the key for student- athlete's safety.

If you think your child has suffered a concussion

Any athlete even suspected of suffering a concussion should be removed from the game or practice immediately. No athlete may return to activity after an apparent head injury or concussion, regardless of how mild it seems or how quickly symptoms clear, without medical clearance. Close observation of the athlete should continue for several hours.

You should also inform your child's coach if you think that your child may have a concussion. Remember, it's better to miss one game than miss the whole season. And when in doubt, the athlete sits out.
