**EXCLUSIVE MEMBER PRICING**  
**AED Packages Starting At**  
**\$895**

"Sudden Cardiac Arrest can happen at the ice hockey rink to a player, coach, parent, official, or spectator. The single most important determinant for survival is the time from collapse to the application of an automated external defibrillator (AED). Shock within one minute of collapse raises the survival rate to 90% and within three minutes increases the chance of survival to 70%. Make sure you have an AED in your rink, know where it is located, and learn how to use it."

~ Dr. Michael J. Stuart,  
Chief Medical and Safety Officer, USA Hockey
