WORLD TRIATHLON CORPORATION ANTI-DOPING PROGRAM
2012 Program Statistics

The World Triathlon Corporation (WTC) announced today their 2012 Anti-Doping Program Statistics. A total of 449 doping control tests were carried out under the jurisdiction of the WTC in 2012. Of those tests, 234 were performed in-competition, and 215 were out-of-competition (OOC) tests. This represents a 28% increase in total testing when compared with 2011.

The WTC Anti-Doping Program continued the important focus on the expansion of the Athlete Biological Passport (ABP) conducted in conformance with the World Anti-Doping Agency (WADA) Athlete Biological Passport Operating Guidelines. Of significance, WTC continued to collect ABP samples as part of over 95% of its Out-of-Competition tests, while conducting a total of 217 ABP tests. The WTC continues to work with the Salt Lake Medicine Research and Technology Laboratory (SMRTL) to provide scientific oversight of the ABP efforts.

The WTC’s comprehensive testing program coordinates planning and results with key National Anti-Doping Agencies Worldwide. This collaboration is critical to successful and strategic deterrence and detection as well as to minimizing the duplication of efforts. To this end, WTC utilizes the ADAMS (Anti-Doping Administration and Management System) for management of its testing program, ABP and Athlete Whereabouts.

The WTC’s I AM TRUE® Campaign expanded its partnership with the WADA’s “Say No! to Doping” program during the 2012 IRONMAN World Championships in Kailua-Kona, Hawai`i. The WTC and WADA staffed an outreach tent at the IRONMAN Village Expo where resources and information were provided to the race’s nearly 2,000 athletes, both professional and age group.

In addition, the outreach team again shared the anti-doping message with the next generation of triathletes at the ‘Keiki Dip ‘n’ Dash’ children’s event, which took place Tuesday, Oct. 9, 2012, and was also designated as ‘Say NO! to Doping’ day.

In 2012, WTC reported two anti-doping rule violations. Individual cases of alleged doping violations are announced at the time of the resolution.

Additional information regarding the WTC’s Anti-Doping Program is available at www.ironman.com/triathlon/organizations/anti-doping/.

The following is a summary of specific WTC anti-doping statistics for 2012
